Model 560 Cabinet

The Zeltex 560 Cabinet is designed to house any of the 500 series computing elements. Two power supplies are available with this cabinet, and these simply plugin from the front as shown. One supply offers  $\pm 130$  volts at 1 amp and the other offers  $\pm 130$  volts at 0.8 amp and  $\pm 100$  volt reference at 0.2 amp. If the cabinet is obtained without an internal supply, up to 16 computer cards can be accommodated; with internal power, up to 12 cards can be inserted.

All power levels are unconditionally current limited and designed for 'self tracking'. The reference supply can be slaved to an external source. Overload indication is provided on the reference supply, and the overload indicating lamps are visible through the front panel. Stability of the reference supply is well within 0.01%.

Selling Price	560 Cabinet (without internal power):	\$ 200
	560A Cabinet (with $\pm 130$ v power):	775
	560B Cabinet (with $\pm 130$ v & $\pm 100$ v):	1040
